TeSys E has helped our customers with a value system focused on **Safety, Simplicity & Reliability**.

Schneider Electric has always believed in customer satisfaction and ensures that we renovate our offers to meet the changing needs of our customers.

Now Schneider Electric is happy to announce that

TeSys E is now EasyPact TVS
More Safe, Simple & Reliable

A global environment friendly range from Schneider Electric.

EasyPact TVS

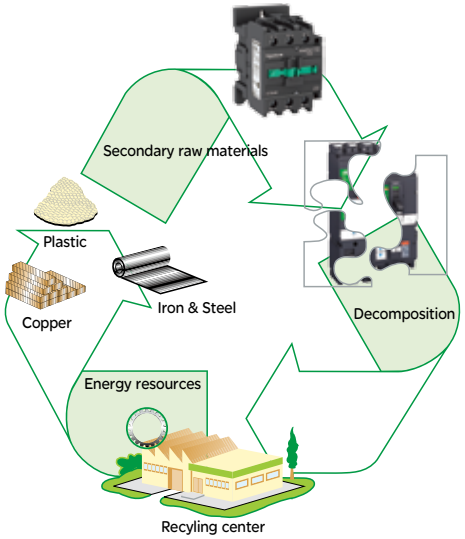
The easy choice for simplicity & flexiblity

Environmentally responsible

- EasyPact TVS is part of the Schneider Electric energy efficiency approach. Designed for easy disassembly and recycling at end of life, EasyPact TVS complies with environmental directives RoHS* and WEEE**, and with ISO 14001 standards, thanks to non - polluting factories.

Schneider Electric fully takes into account environmental requirements, starting right from the design phase of every product through to the end of its service life:

- the materials used for EasyPact TVS are not potentially dangerous to the environment
- the production facilities are non-polluting in compliance with the ISO 14001 standard
- the energy dissipated per pole is low, making energy losses insignificant
- the materials are marked to facilitate sorting for recycling at the end of product service life.



EasyPact TVS Contactors and accessories can be recycled and reused optimally.

* RoHS = Restriction of Hazardous Substances
** WEEE = Waste Electrical and Electronic Equipment

EasyPact TVS is...Reliable

Conforms to IEC 60947-1 for contactors

- CPRI Tested Type 2 Co-ordination chart with fuse/fuse less available
- Complete Range with CE Marking

High electrical & Mechanical endurance

- 10 Million mechanical operations for entire range
- 1.4 Million electrical operations for 9-12 Amp

Reliable Accessories

- Auxiliary Contact Blocks
- Mechanical Interlock
- RC switch Suppressor

Coil voltage code

		24	48	110	220	240	380	415	440
LC1E06-300	50 Hz	B5	E5	F5	M5	U5	Q5	N5	R5
	60 Hz	B6	-	F6	M6	-	Q6	-	R6
LC1E400-630	50/60Hz	-	E7	F7	M7	U7	Q7	N7	-

Contactor: how to determine the full commercial reference ?

Example:

LC1E	12	10	U	5	ref. LC1E1210U5
				5	50 Hz
				Coil voltage code	240 V
				Auxiliary contact configuration (2)	01 1NC 10 1NO N/A 1NO+1NC
				Rated operation current AC3	12 A
				Contactor	EasyPact TVS

Example 1: you need a 32 A contactor, 1 NC auxiliary contact, 24 V - 50 Hz coil ⇨ **LC1E3201B5**
Example 2: you need a 120 A contactor, 1 NC + NO auxiliary contact, 220 V - 50 Hz coil ⇨ **LC1E120M5**

(2) Only up to LC1E38.

EasyPact TVS is...Simple

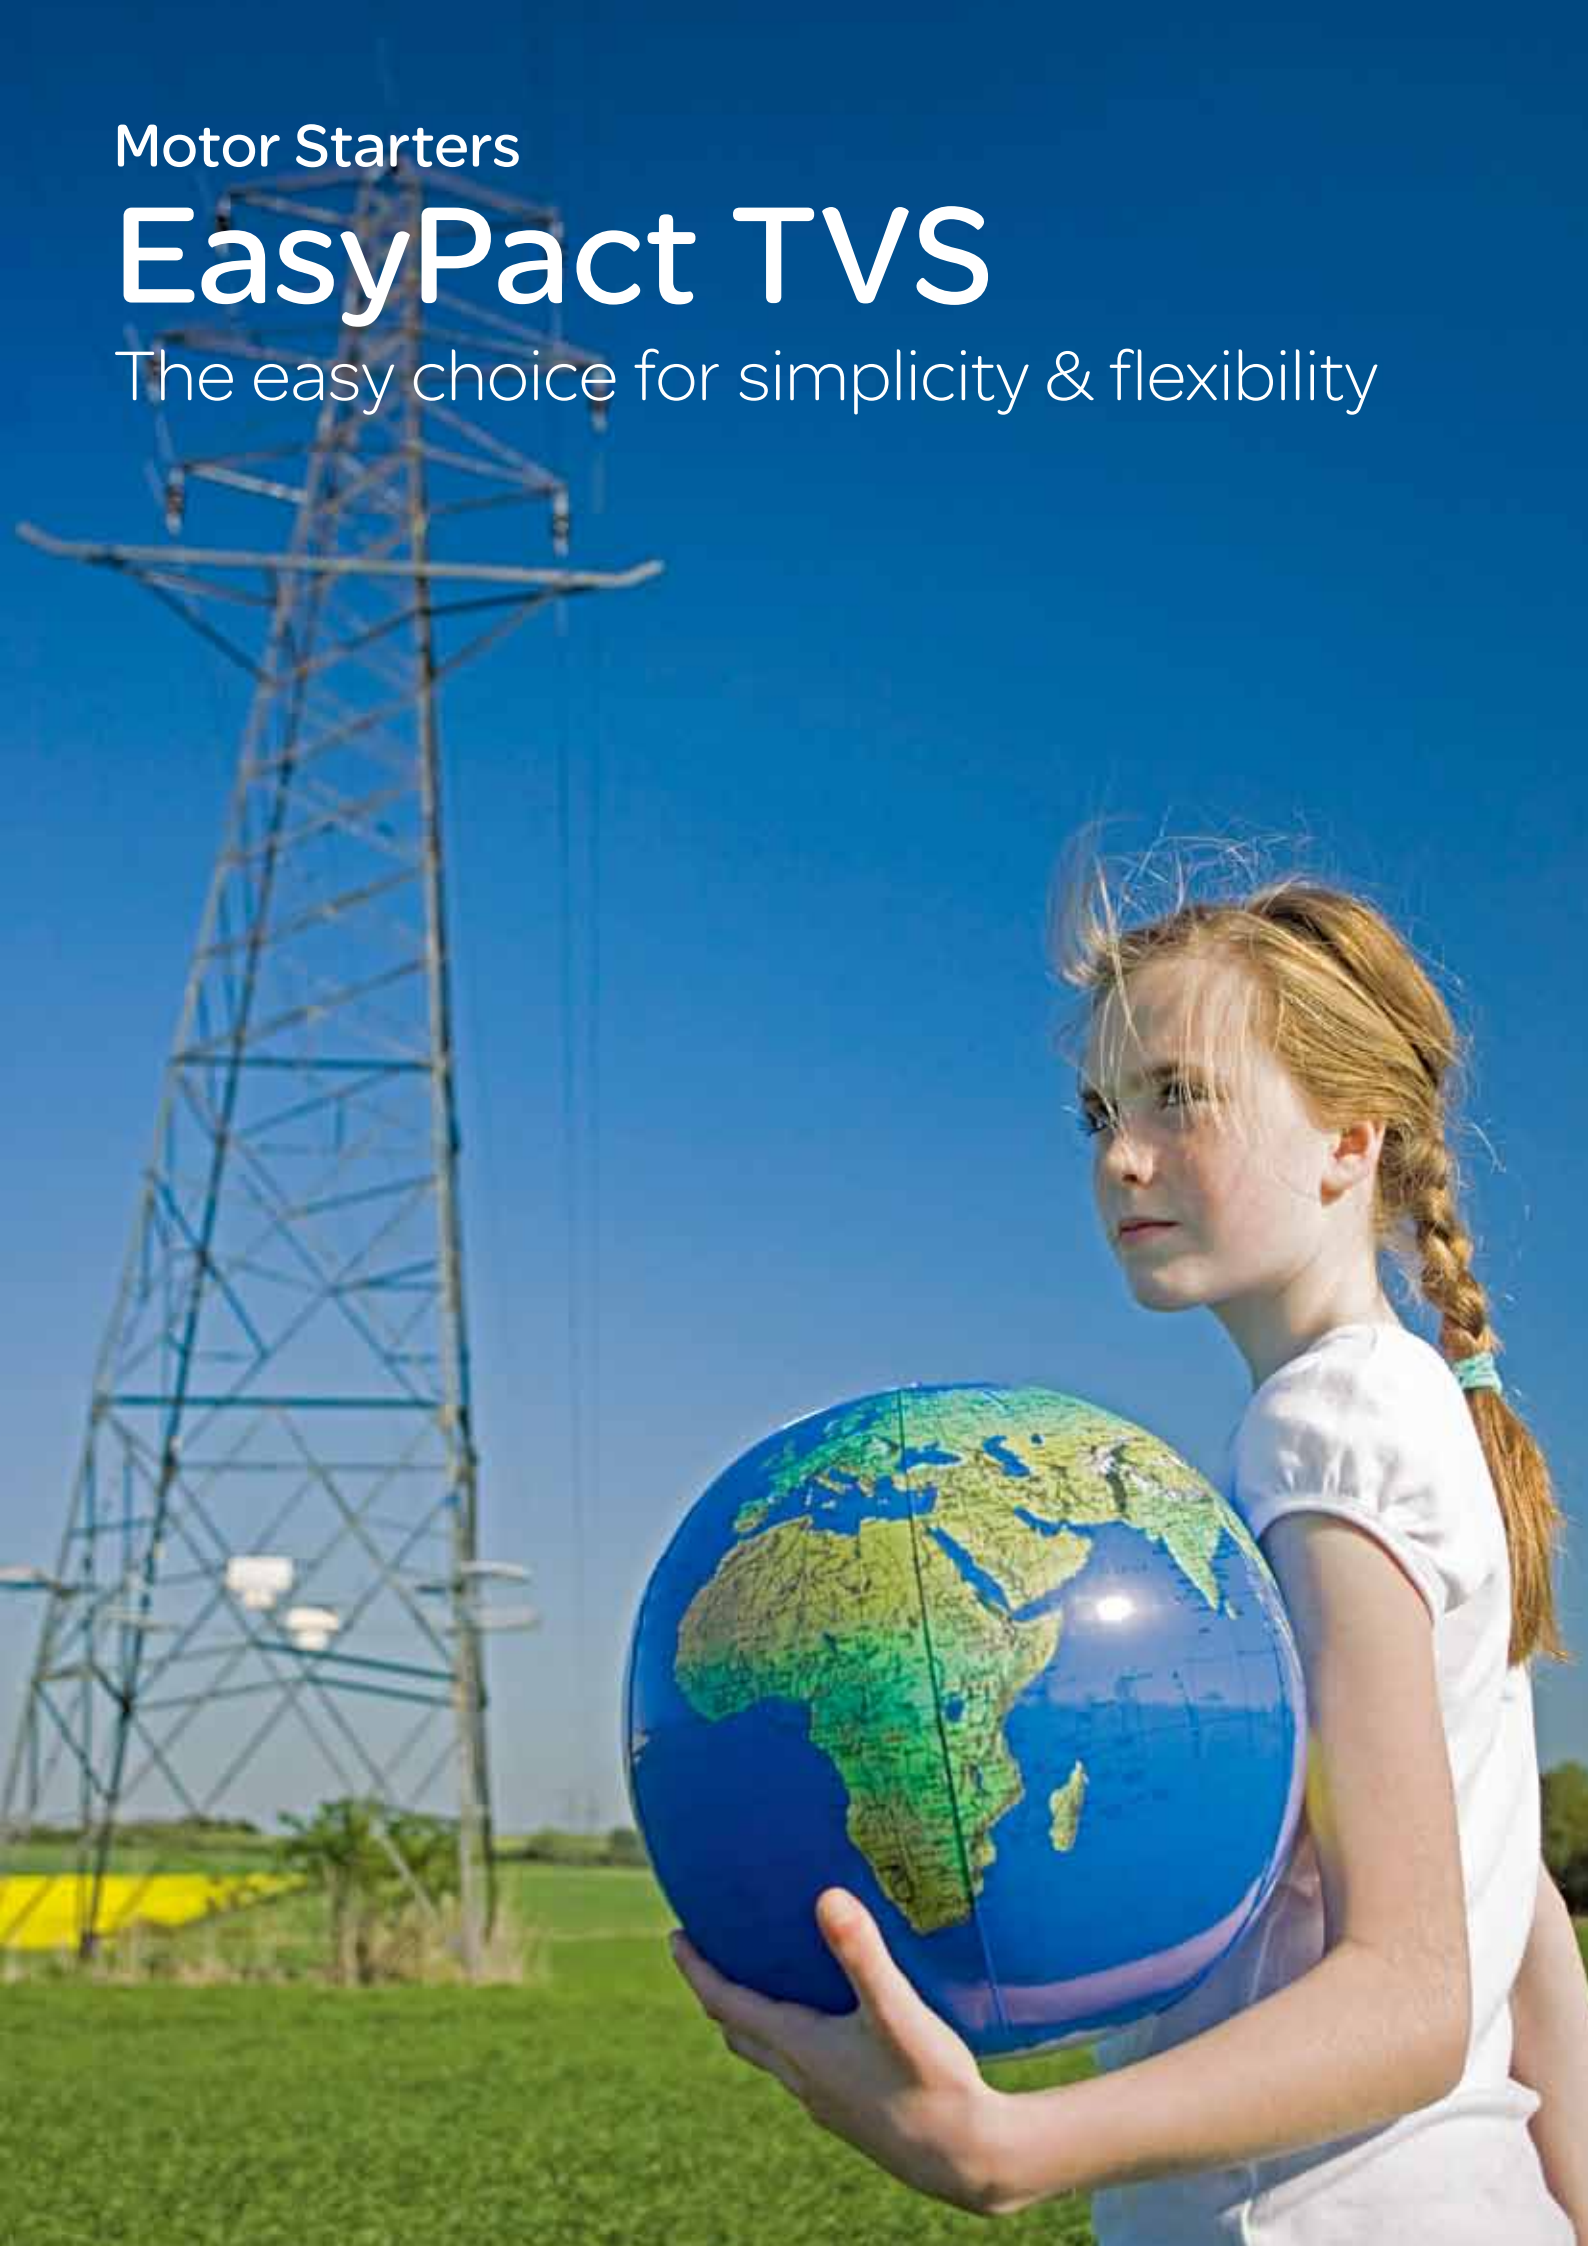
- New AC-3 rating of 6 Amp
- TVS stands for TeSys Value System

Schneider Electric has a rich experience in control gear having installed base world wide (more than 100 countries)

Motor Starters

EasyPact TVS

The easy choice for simplicity & flexibility



EasyPact TVS: control & protection,

Leader in the motor starter market for more than 80 years, Schneider Electric has designed EasyPact TVS range to provide you with the competitive solutions you were expecting.

EasyPact TVS starters range is the perfect fit between quality, features and price.

A cost-effective offer

> The best price for the performance and quality level you need.
> A maximum of solutions with an optimal number of products.
> Designed to perform the essential starter's functions: control and overload protection.

Simple and intuitive

> Easy to install.
> Covering 80 % of applications.
> With the key accessories to easily build lots of Do-It-Yourself solutions.
> With an intuitive commercial references system: easy to order, easy to understand and easy to remember.

Guaranteed availability

> Available in distribution.
> EasyPact TVS fully benefits from Schneider Electric world wide policies: in terms of standards of production, distribution, quality, availability, services and after-sales support.

in a simple way

Common characteristics

> Contactors compatible with:

LAEN● auxiliary contact blocks

LAETSD time delay auxiliary contact (from 25 A contactor)

LAERC●● RC switch suppressor (up to 95 A)

LAEM● mechanical interlock

Utilisation categories

> Class AC-1: AC loads with cos φ at least equal to 0.95 (resistive load, heating, distribution, etc.).

> Class AC-3: squirrel-cage motors with breaking taking place with the motor running.

** above 400A will be available from Q2 2013*

Seperate components

Auxiliary contact blocks, add-on modules and accessories, see pages 18 to 19.

Coil spare parts

For maintenance, each coil can be ordered separatly, see page 20 to 24.

(1) LC1E06 to E65: clip-on mounting on 35 mm ⊔ rail AM1 DP or screw fixing.
LC1E80 to E95: clip-on mounting on 35 mm ⊔ rail AM1DP or 75 mm ⊔ rail AM1 DL or screw fixing.
LC1E120 and E160: clip-on mounting on 2 x 35 mm ⊔ rail AM1 DP or screw fixing.

EasyPact TVS contactors
New Wide Band Coil contactors up to 38A

- Complete range of contactors & OLR up to 300A with standard coil
- Contactors up to 38A with Wide Band Coils
- Confirming to IEC 60947-4-1
- CE marking
- Ambient Temperature upto 60 C
- Type 2 coordination Charts available
- Wide variety of accessories

RC surge suppressor

- Effective protection for circuits highly sensitive to «high frequency» interference and transcient generated when the contactor coil is switched off. For use only in cases where the voltage is virtually sinusoidal, i.e. less than 5 % total harmonic distortion.
- Voltage limited to 3 Uc max. and oscillating frequency limited to 400 Hz max.
- Slight increase in drop-out time (1.2 to 2 times the normal time).

■ *means the relay can match with contactor both in electrical and mechanical.*

□ *means the relay can match with contactor only in electrical (can not directly mounting).*

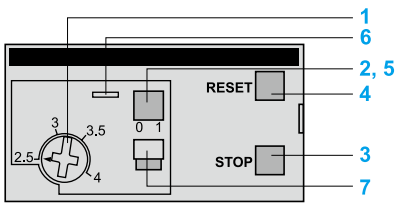
EasyPact TVS thermal overload relays

Presentation

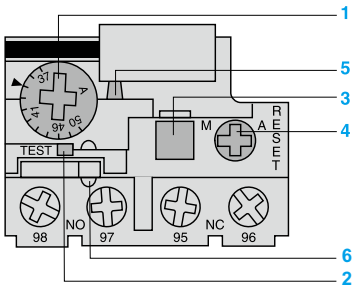
EasyPact TVS thermal overload relays are designed to protect a.c. circuits and motors against:
- overloads
- phase failure
- Long starting time
- prolonged stalled rotor condition.

The thermal relay controls permanently the current driven by the motor. When this current exceeds the setting it's auxiliary contacts will change state, causing the motor to stop.

Description



LRE●●, LRE48●



LRE3●●

1 Adjustment dial Ir.
2 Test button.
Operation of the Test button allows:
- checking of control circuit wiring,
- simulation of relay tripping (actuates both the N/O and N/C contacts).
3 Stop button. Actuates the N/C contact; does not affect the N/O contact.
4 Reset button.
5 Trip indicator.
6 Setting locked by sealing the cover.
7 Selector for manual or automatic reset.

LRE relays are supplied with the selector in the manual position, protected by a cover. Deliberate action is required to move it to the automatic position.

RC suppressor

- Effective protection for circuits highly sensitive to «high frequency» interference and transcient generates when the contactor coil is switched off. For use only in cases where the voltage is virtually sinusoidal, i.e. less than 5 % total harmonic distortion.
- Voltage limited to 3 Uc max. and oscillating frequency limited to 400 Hz max.
- Slight increase in drop-out time (1.2 to 2 times the normal time).

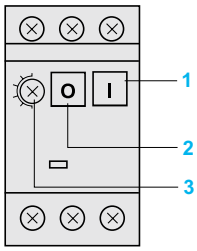
Protection components
Thermal-magnetic motor circuit-breakers GZ1 E

Presentation



GZ1 E motor circuit-breakers are 3-pole thermal-magnetic circuit-breakers specifically designed for the control and protection of motors, conforming to standards IEC 60947-2 and IEC 60947-4-1.

Connection
These circuit-breakers are designed for connection by screw clamp terminals. This technique ensures secure, permanent and durable clamping that is resistant to harsh environments, vibration and impact and is even more effective when conductors without cable ends are used. Each connection can take two independent conductors.

Pushbutton control.
Energisation is controlled manually by operating the Start button “I” 1. De-energisation is controlled manually by operating the Stop button “O” 2, or automatically by the thermal-magnetic protection elements or by a voltage trip attachment.

Protection of motors and personnel
Motor protection is provided by the thermal-magnetic protection elements incorporated in the motor circuit-breaker.
The magnetic elements (short-circuit protection) have a non-adjustable tripping threshold, which is equal to about 13 times the maximum setting current of the thermal trips.
The thermal elements (overload protection) include automatic compensation for ambient temperature variations.
The rated operational current of the motor is displayed by means of a graduated knob 3.
Personnel protection is also provided. All live parts are protected against direct finger contact.
GZ1 E motor circuit-breakers are easily installed in any confi guration thanks to their universal fi xing arrangement: screw fi xing or clip-on mounting on symmetrical, asymmetrical or combination rails.

Environment

Circuit-breaker type			GZ1 E	
Conforming to standards			IEC 60947-2, IEC 60947-4

Coordination between protection & control components

Coordination: safety and faster restart after a short circuit

This benefit is obtained by choosing contactors with Schneider Electric guaranteed coordination.

What exactly is coordination?

A contactor is said to be "coordinated" with the upstream protection device when its behaviour is controlled in the event of a short circuit.
This behaviour can be:

- type 1: guaranteed not to pose a danger to the workforce and not to damage the installation. It is accepted that the contactor should be destroyed or repaired.
- type 2: type 1 + put back into service possible after any maintenance operation (contact separation, for example).

Compliance tests

Only the very stringent certified tests performed by Schneider Electric can guarantee the behaviour described by IEC 60947-4-1.

Glossary

Altitude	The rarefied atmosphere at high altitude reduces the dielectric strength of the air and hence the rated operational voltage of the contactor. It also reduces the cooling effect of the air and hence the rated operational current of the contactor (unless the temperature drops at the same time). No derating is necessary up to 3000 m. Derating factors to be applied above this for main pole operational voltage and current (a.c.supply) are as follows:

Altitude	3500m	4000m	4500m	5000m
Rated operational voltage	0.90	0.80	0.70	0.60
Rated operational current	0.92	0.90	0.88	0.86

Ambient air temperature	The temperature of the air surrounding the device, measured near to the device. The operating characteristics are given: > with no restriction for temperatures between -5 and +55 C > with restrictions, if necessary, for temperatures between -40 and +70 C.
Rated operational current (Ie)	This is defined taking into account the rated operational voltage, operating rate, ulilisation category and ambient temperature around the device.
Conventional thermal current (Ith) (1)	The current which a closed contactor can sustain for a minimum of 8 hours without its temperature rise exceeding the limits given in the standards.
Permissible short-time rating	The current which a closed contactor can for a short time after a period of no load, without dangerous overheating.
Rated operational voltage (Ue)	This is the voltage value which, in conjunction with the rated operational current, determines the use of the contactor or starter, and on which the corresponding tests and the utilisation category are based. For 3-phase circuits, it is expressed as the voltage between phases.
Rated control circuit voltage (Uc)	The rated value of the control circuit voltage, on which the operating characteristics are based. For a.c. applications, the values are given for a sinusoidal wave form (less than 5% total harmonic distortion).
Rated insulation voltage (Ui)	This is the voltage value used to define the insulation characteristics of a device and referred to in dielectric tests determining leakage paths. As the specifications are not identical for all standards, the rated value given for each of them is not necessarily the same.
Rated impulse withstand voltage (Uimp)	The peak value of a voltage surge which the device is able to withstand without breaking down.
Rated operational power (expressed in kW)	The rated power of the standard motor which can be switched by the contactor, at the rated operational voltage.
Rated breaking capacity (2)	This is the current value which the contactor can break in accordance with the breaking conditions specified in the IEC standard.
Rated making capacity (2)	This is the current value which the contactor can make in accordance with the making conditions specified in the IEC standard.
On-load factor (m)	This is the ratio between the time the current flows (t) and the duration of the cycle (T).  m=t/T Cycle duration: duration of current flow + time at zero current.
Pole impedance	The impedance of one pole is the sum of the impedance of all the circuit components between the input terminal and the output terminal. The impedance comprises a resistive component (R) and an inductive component (X = Lω). The total impedance therefore depends on the frequency and is normally given for 50 Hz. This average value is given for the pole at its rated operational current.
Electrical durability	This is the average number of on-load operating cycles which the main pole contacts can perform without maintance. The electrical durability depends on the utilisation category, the rated operational current and the rated operational voltage.
Mechanical durability	This is the average number of no-load operating cycles (i.e. with zero current flow through the main pole) which the contactor can perform without mechanical failure.

(1) Conventional thermal current, in free air, conforming to IEC standards.
(2) For a.c. applications, the breaking and making capacities are expressed by rms value of the symmetrical component of the short-circuit current. Taking into account the maximum asymmetry which may exist in the circuit, the contacts therefore have to withstand a peak asymmetrical current which may be twice the rms symetrical component.

Note: these definitions are extracted from standard IEC 60947-1.

Definitions

Contactor utilisation categories conforming to IEC 60947-4

The standard utilisation categories define the current values which the contactor must be able to make or break.
These values depend on:
> the type of load being switched: squirrel cage or slip ring motor, resistors
> the conditions under which making or breaking takes place: motor stalled, starting or running, reversing, plugging.

a.c. applications

> Category AC-1:
This category applies to all types of a.c. load with a power factor equal to or greater than 0.95.
Examples: heating, lighting, distribution.

> Category AC-3:
This category applies to squirrel cage motors with breaking during normal running of the motor. On closing, the contactor makes the starting current, which is about 7 times the rated current of the motor.
On opening, it breaks the rated current drawn by the motor; at this point, the voltage at the contactor terminals is about 20 % of the mains supply voltage. Breaking is light.
For example: all standard squirrel cage motors: lifts, escalators, conveyor belts, bucket elevators, compressors, pumps, mixers, air condition units, etc...

> Category AC-4:
The contactor closes at a current peak which may be as high as 5 or 7 times the rated motor current. On opening it breaks this same current at a voltage which is higher, the lower the motor speed. This voltage can be the same as the mains voltage. Breaking is severe.
This category covers applications with plugging and inching of squirrel cage and slip ring motors.
For example: printing machines, wire drawing machines, cranes and hoists, metallurgy industry.

Technical information
Product standards and certifications

Standardisation

Conformity to standards

Schneider Electric products satisfy, in the majority of cases, European (for example: CENELEC) or international (IEC) standards. These product standards precisely define the performance of the designated products (such as IEC 60947 for low voltage equipment).
When used correctly, as designated by the manufacturer and in accordance with regulations and correct practices, these products will allow users to build equipment, machine systems or installations that conform to their appropriate standards (for example: IEC 60204-1, relating to electrical equipment used on industrial machines).
Schneider Electric is able to provide proof of conformity of its production to the standards it has chosen to comply with, through its quality assurance system.
On request, and depending on the situation, Schneider Electric can provide the following:

- a declaration of conformity
- a certificate of conformity (ASEFA/LOVAG)
- a homologation certificate or approval, in the countries where this procedure is required or for particular specifications, such as those existing in the merchant navy.

Code	Certification authority		Country
	Name	Abbreviation	
GOST	Gosudarstvenne Komitet Standartov	GOST	Russia
IEC	International Electrotechnical Commission	IEC	Worldwide

Regulations

European Directives

Opening up of European markets assumes harmonisation of the regulations pertaining to each of the member countries of the European Union.
The purpose of the European Directive is to eliminate obstacles hindering the free circulation of goods within the European Union, and it must be applied in all member countries. Member countries are obliged to transcribe each Directive into their national legislation and to simultaneously withdraw any contradictory regulations. The Directives, in particular those of a technical nature which concern us, only establish the objectives to be achieved, referred to as “essential requirements”.
The manufacturer must take all the necessary measures to ensure that his products conform to the requirements of each Directive applicable to his production.
As a general rule, the manufacturer certifies conformity to the essential requirements of the Directive(s) for his product by affixing the CE mark.
The CE mark is affixed to Schneider Electric brand products concerned, in order to comply with French and European regulations.

Significance of the CE mark

- The e mark affixed to a product signifies that the manufacturer certifies that the product conforms to the relevant European Directive(s) which concern it; this condition must be met to allow free distribution and circulation within the countries of the European Union of any product subject to one or more of the E.U. Directives.
- The e mark is intended solely for national market control authorities.
- The e mark must not be confused with a conformity marking.

European Directives (continued)

For electrical equipment, only conformity to standards signifies that the product is suitable for its designated function, and only the guarantee of an established manufacturer can provide a high level of quality assurance.
For Schneider Electric brand products, one or several Directives are likely to be applicable, depending on the product, and in particular:

- the Low Voltage Directive 2006/95/EC: the e mark relating to this Directive has been compulsory since 16th January 2007.
- the Electromagnetic Compatibility Directive 89/336/EEC, amended by Directives 92/31/EEC and 93/68/EEC: the e mark on products covered by this Directive has been compulsory since 1st January 1996.

ASEFA-LOVAG certification

The function of ASEFA (Association des Stations d’Essais Française d’Appareils électriques - ***Association of French Testing Stations for Low Voltage Industrial Electrical Equipment)*** is to carry out tests of conformity to standards and to issue certificates of conformity and test reports. ASEFA laboratories are authorised by the French authorisation committee (COFRAC).
ASEFA is now a member of the European agreement group LOVAG (Low Voltage Agreement Group). This means that any certificates issued by LOVAG/ASEFA are recognised by all the authorities which are members of the group and carry the same validity as those issued by any of the member authorities.

Note

For further details on a specific product, please refer to the "Characteristics" pages in this catalogue or consult your Regional Sales Office.
